What's New in the?

RegEditor is a Registry Editor that lets you edit.REG files safely. There are two parts to RegEditor: the registry editing part and the.REG files viewer. The registry editing part reads the.REG files and allows you to modify the registry. You can edit any value, key, or root key. You can move or rename any value or key, or just delete it. You can add new values, keys, or root keys. You can create subkeys and values. You can view the registry with the.REG file viewer. You can do things like: navigate the file, toggle the read/write mode, and display the file. The.REG file viewer is not able to save anything directly. In order to save the changes to the registry you have to close RegEditor. Then you must open a command prompt (DOS Prompt) and then you can save the changes to the registry by doing the following: reg add [registrypath] [key] [value] For example, to add a new key to the registry: reg add HKCU\Software\Microsoft\Windows NT\CurrentVersion\Windows The following command line is used to remove the new key from the registry. reg delete HKCU\Software\Microsoft\Windows NT\CurrentVersion\Windows Why RegEditor? RegEditor is a registry editor which allows you to edit the registry safely. When you make changes to the registry with the normal Windows editor, you are risking that these changes will be overwritten on next boot. Or your computer may just crash. You don't have this problem with RegEditor. You can edit the registry safely even if you are moving the registry file and the registry files are being used. You can also use RegEditor safely if you have a corrupt.REG file. RegEditor won't make mistakes when it is reading a.REG file. Where to find it? RegEditor is not a GUI based application. So you won't find it in the add/remove programs area of the Windows operating systems. RegEditor.REG files viewer The RegEditor.REG file viewer is a tool that lets you view the contents of.REG files and has a number of editing capabilities, such as viewing the file, navigating, and making changes.
